Research Problem

Multivariate Data

Geological Model

Attributes

- Rock type
- Porosity
- Permeability
- Water Saturation
- Oil Saturation
- Oil flow rate
- Water flow rate
- Pressure
- ...

production well (oil)

**How to visualize multiple attributes in
a single view?**

2D Layering

[Kirby *et al.*, VIS, 1999]

Visual encoding

1st Layer

- **Ellipse glyphs**
(divergence)

2nd Layer

- **Colors**
(vorticity)

3rd Layer

- **Arrow glyphs**
(velocity)

Layering on Surfaces

- Layering on Surfaces

- Difficult to render 2D-glyphs and other *visual representations on arbitrary surfaces*

Lack of research continuity

Previous Work

-  2D Layering
-  Layering on Surfaces

- Difficult to render 2D-glyphs and other **visual representations on arbitrary surfaces**

Lack of research continuity

Previous Work

- Pelt. *et al.*, 2014
 - Visualization of wall shear stress (WSS)
 - Design of four 2D-glyphs using oriented quads

Research Goal

- 2D Layering
- Layering on Surfaces

- A technique to place 2D representations on arbitrary surfaces.
- Visual design on surfaces similar to 2D
- Extend the concept of layering to co-visualize a high number of attributes on surfaces.

Our Approach

Decals

Definition. *Visual representations (a pattern, a text, a glyph, or a symbol) transferred from a 2D-image to a surface.*

Decal

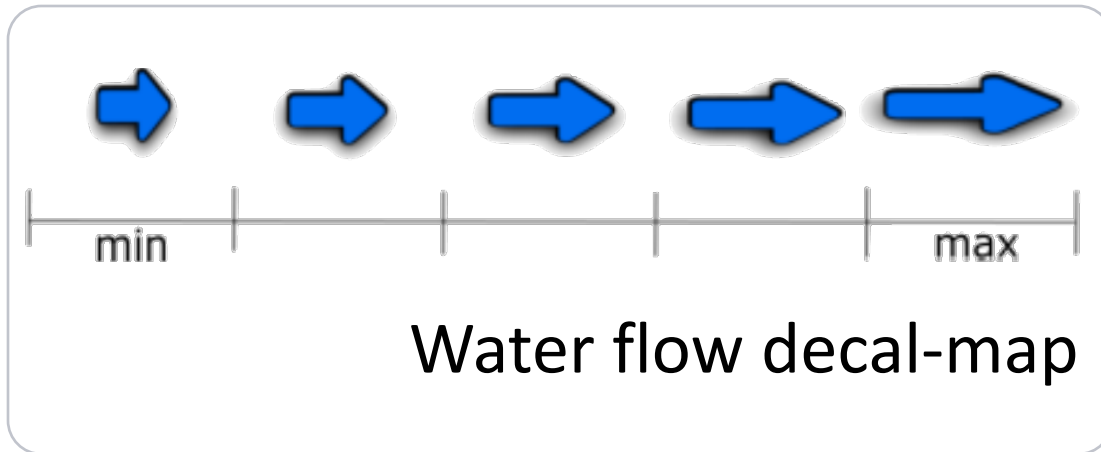

Decal-maps

Definition. *A set of images designed to represent one or more data attributes.*

Decal-maps

Definition. A set of *images* designed to represent one or more data attributes.

Decal-maps

Definition. A set of *images* designed to represent one or more data attributes.

[Praun et al., *TOG*, 2016]

[Seltzer and Kindlmann, *CGF*, 2016]

Decals – Previous Work

- Focus on aesthetic value

Character editing

[Schmidt *et al.*, 2006]

[de Groot *et al.*, 2013]

Games

[Krassnigg, 2010]

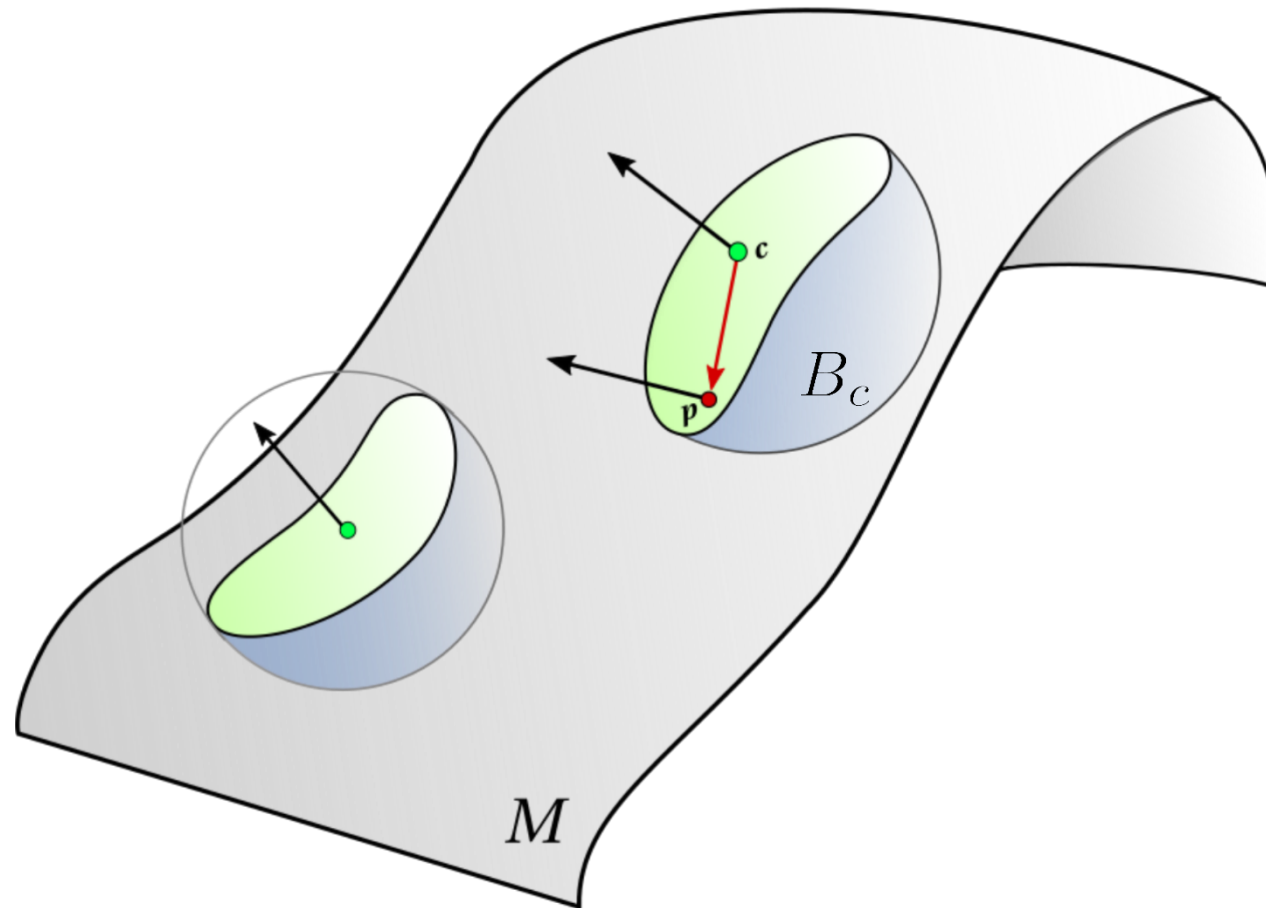

Decals for Visualization - ?

- First technique using decals for multivariate visualization
- Stringent requirements in visualization
 - Should be independent of surface parametrization
 - Should not rely on topological information
 - Should be simple and efficient

Proposed Technique

Proposed Technique – *Layered Decals*

- Sphere Mask: solid sphere intersected with a surface is a disk

Proposed Technique – Layered Decals

- Local parametrization (exponential maps)
 - Angular coordinate $\theta_c(p)$
 - Radial coordinate $r_c(p)$
 - Geodesic (difficult and costly to compute)
- Decals are small: fine distortions not required [de Groot *et al.*, 2013]
- Geodesic approximation
 - Euclidean distance $\|p - c\|$
 - Paper discusses two other distances (Bowers *et al.*, 2010; Geng *et al.* 2011).

Proposed Technique – *Layered Decals*

- Compute the sphere masking:
 - Area of the surface inside the sphere
- Build the local parametrization
- Apply a decal

Local Parametrization

Implementation

GPU-based Implementation

- Overview

Layered decals

GPU-based Implementation

Pressure decal-map

Results: Multivariate Visualization Design

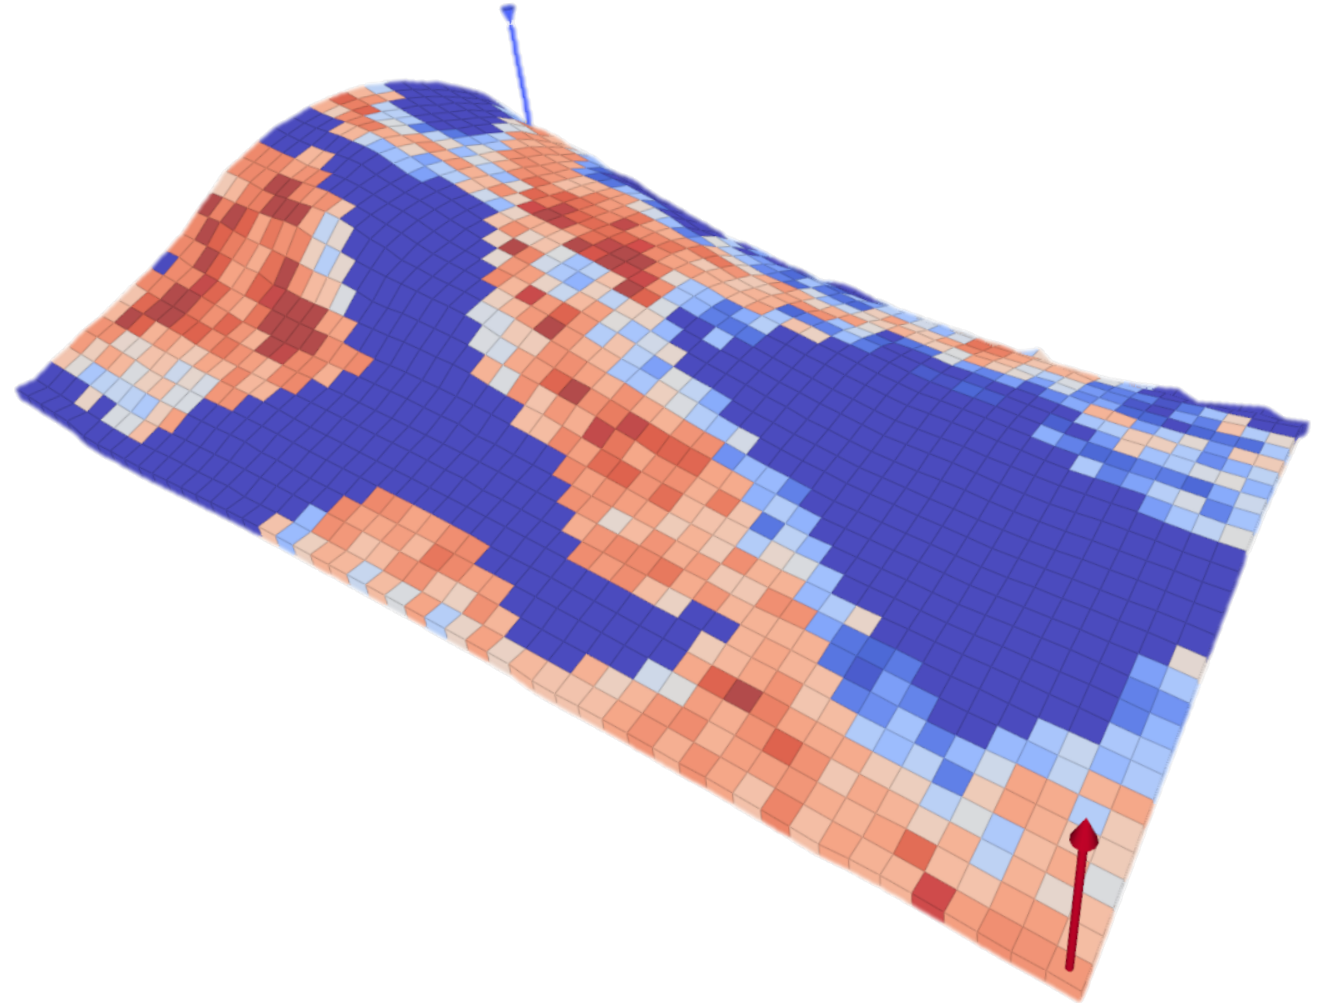

Results

- Two case studies
 - Multivariate Geographic Visualization
 - **Multivariate Geological Visualization**
- Apply the layering concept on surfaces using decal-maps
- Represent several attributes in a single view

Results: Multivariate Visualization Design

Multivariate Geological Visualization Design

- Attributes
 - Rock type
 - Porosity
 - Water Flow
 - Magnitude and direction
 - Oil Flow
 - Magnitude and direction

Geological Reservoir Model

Layering Process

- Minimize the visual interference between attributes
- Highly exploratory task (design space)

 - Perceptual Studies for Design [Ware, 2012]
 - Traditional Illustrations

Visualization Design – 1st Layer

- Rock type 
 - Categorical data
- Visual Variables
 - Color, texture
- Guidelines for 2D Maps
 - Large areas, light tones
 - Base Layer
 - Pastel colormap

Visualization Design – 2nd Layer

- Porosity (%)
 - Measures the capacity of rocks to store fluids
 - Quantitative data
- Visual variables
 - Position, size, saturation, ...
- Traditional illustration
 - Space between grains

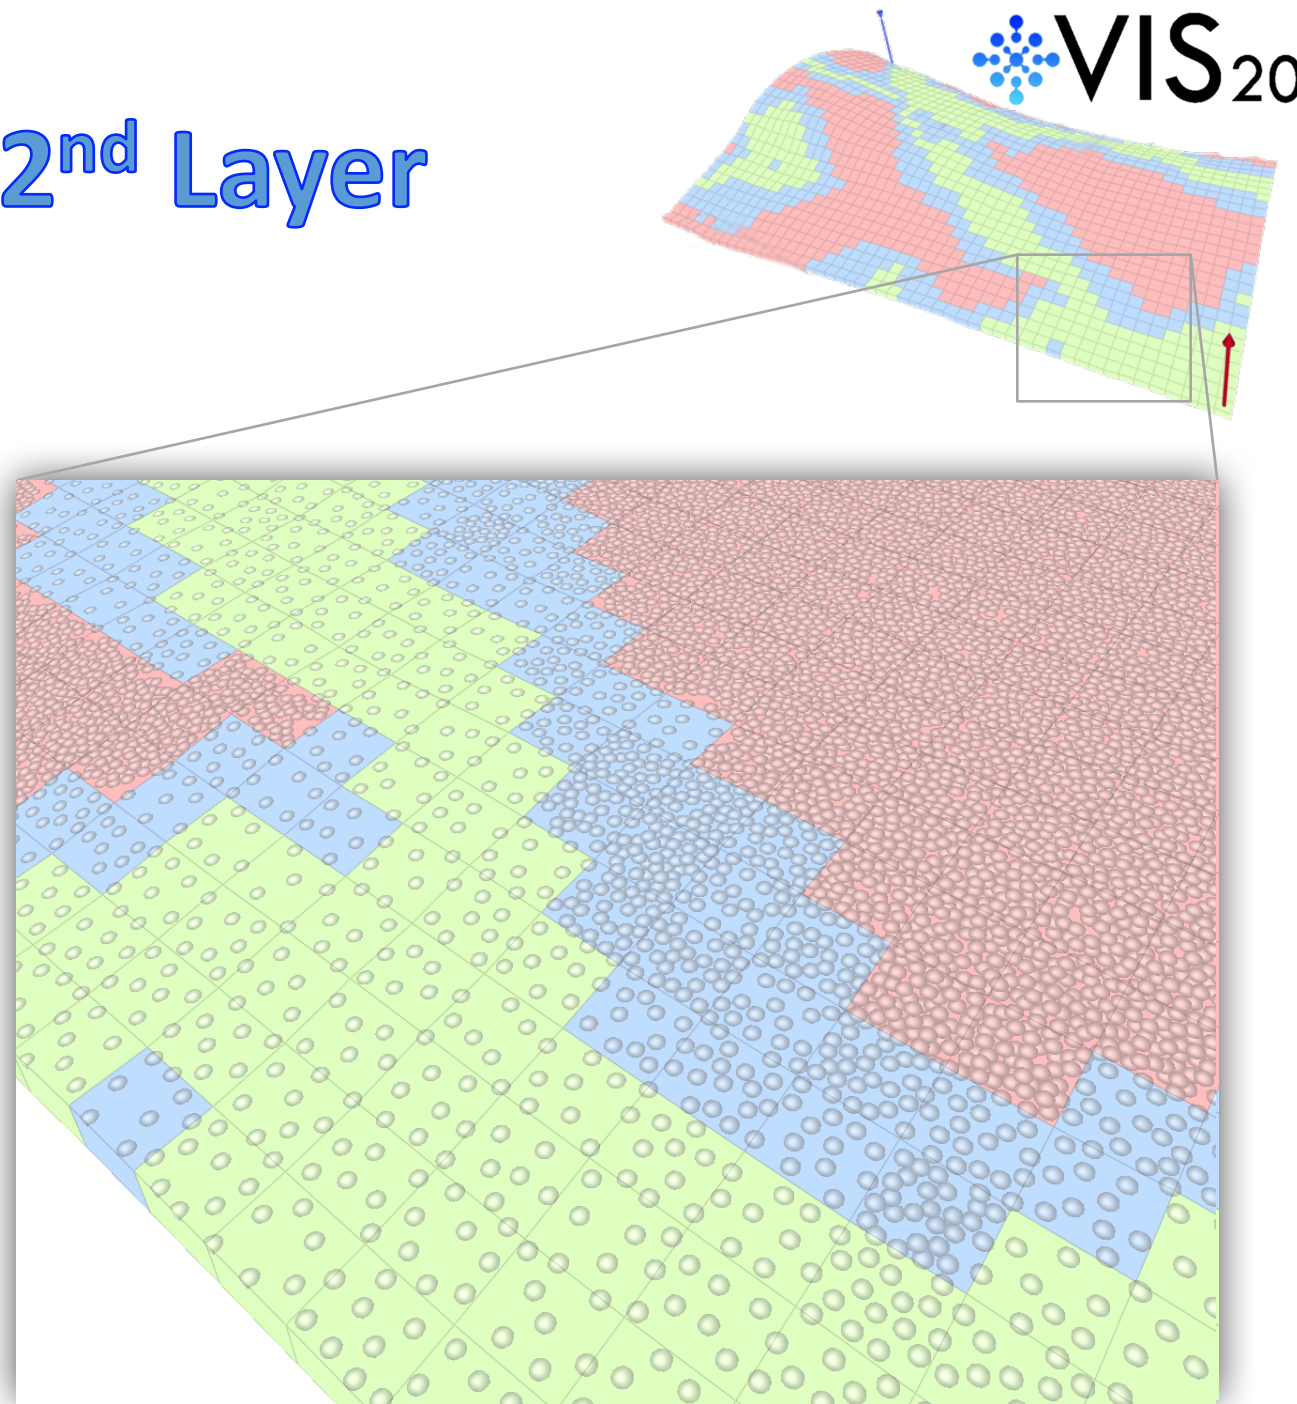

Grain decal

Visualization Design – 2nd Layer

- Porosity (%)
 - Measures the capacity of rocks to store fluids
 - Quantitative data
- Visual variables
 - Position, size, saturation, ...
- Traditional illustration
 - Space between grains
- Poisson importance sampling [Corsini et al., 2012]

Visualization Design – 3rd Layer

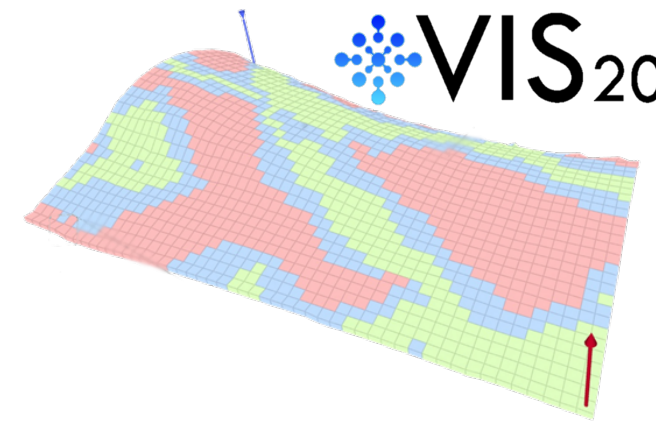

- Water Flow
 - Direction and magnitude
 - Traditional arrow glyphs
- Visual Variables
 - Color, shape
 - **Size, transparency,** texture, saturation, ...

Water flow decal

Water flow decal-map

Visualization Design – 3rd Layer

- Water Flow
 - Direction and magnitude
 - Traditional arrow glyphs
- Visual Variables
 - Color, shape
 - **Size, transparency,** texture, saturation, ...

Water flow decal-map

Visualization Design – 4th Layer

- Oil Flow
 - Direction and magnitude
 - Traditional arrow glyphs
- Visual Variables
 - Color, shape
 - **Size, transparency,** texture, saturation, ...
- Placement Strategy

Oil flow decal

Oil flow decal-map

Visualization Design – 4th Layer

- Oil Flow
 - Direction and magnitude
 - Traditional arrow glyphs
- Visual Variables
 - Color, shape
 - **Size, transparency,** texture, saturation, ...

Multivariate Geological Visualization

- Rock type

- Porosity

- Water flow

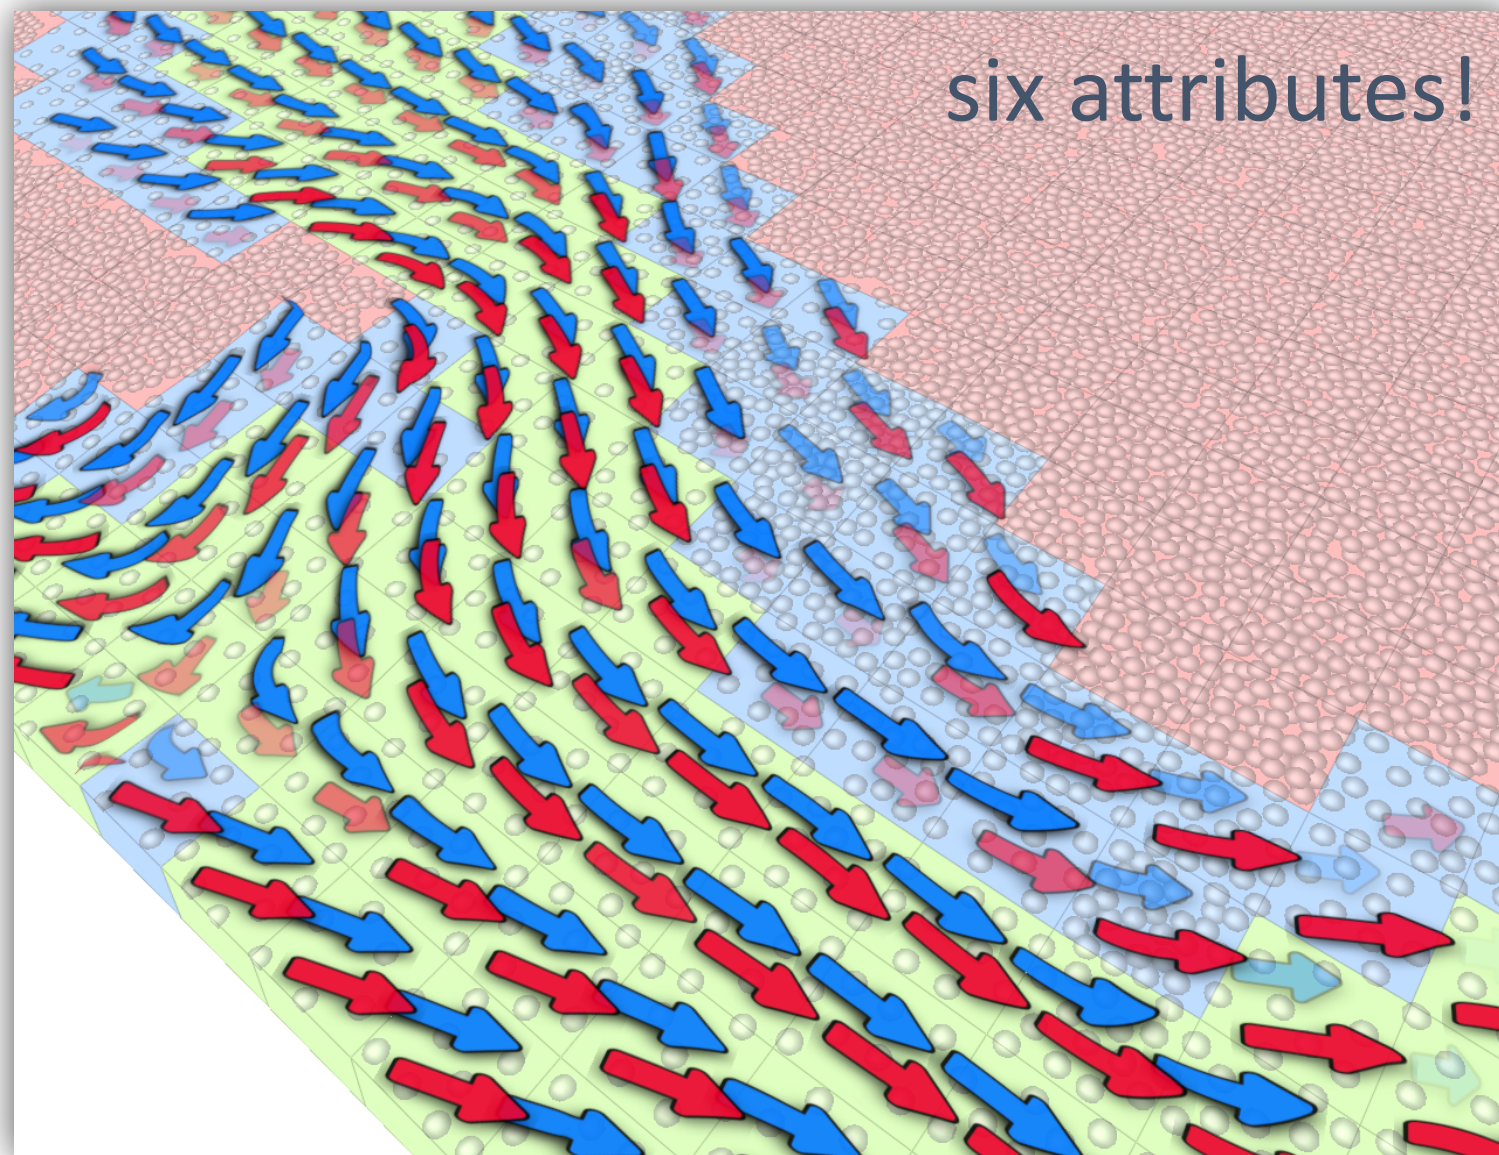

min | | | | max

- Oil flow

min | | | | max

Other Applications

- Synthetic Vector Field
- Illustrative
Flow Visualization
- Similar to LIC
- Decal deformation
refer to the paper

Stroke decal

Conclusions

Contributions

- Decals as form of representation for visualization design
- The concept of decal-map to represent and visualize multivariate data on surfaces
- A real-time technique to place a high number of decals on arbitrary surfaces
- Concept of layering on surfaces by providing an abstract framework applicable to a variety of contexts

ACKNOWLEDGMENTS

- The anonymous reviewers for their constructive comments.
- NASA. Socioeconomic Data and Applications Center (SEDAC) for providing the Earth dataset
- This research was supported in part by the NSERC/ AITF/ FCMG IRC program in Scalable Reservoir Visualization.

Results - Technique

- Performance (laptop Intel i7 with a GeForce GTX 960M 2G, 1280 x 1024)
 - Context of Multivariate Visualization
 - Bunny Stanford Model (normalized coordinates)
 - Monte Carlo Sampling

	No. decals	No. sub-layers	FPS
random uniform sampling	50K	26	19
	100K	41	11
	150K	58	7.5
	200K	72	5.9

Visualization Design – 4th Layer

- Other design observations [Ware, Perception for Design, 2012]

- Consider depth cues to separate layers
- “Strong” colors for small elements
- Concept of separated dimensions
 - E.g. color and texture

Halo, unshapen mask

Results – Layering on Surfaces

Multivariate Geographic Visualization

- Visualization design

geographic data	visual mapping
population density	sequential colormap (one hue)
earthquake location	earthquake decal placement
earthquake magnitude	earthquake decal-map
NP location	NP decal placement
number of nuclear reactors	color saturation
fire detection	point placement

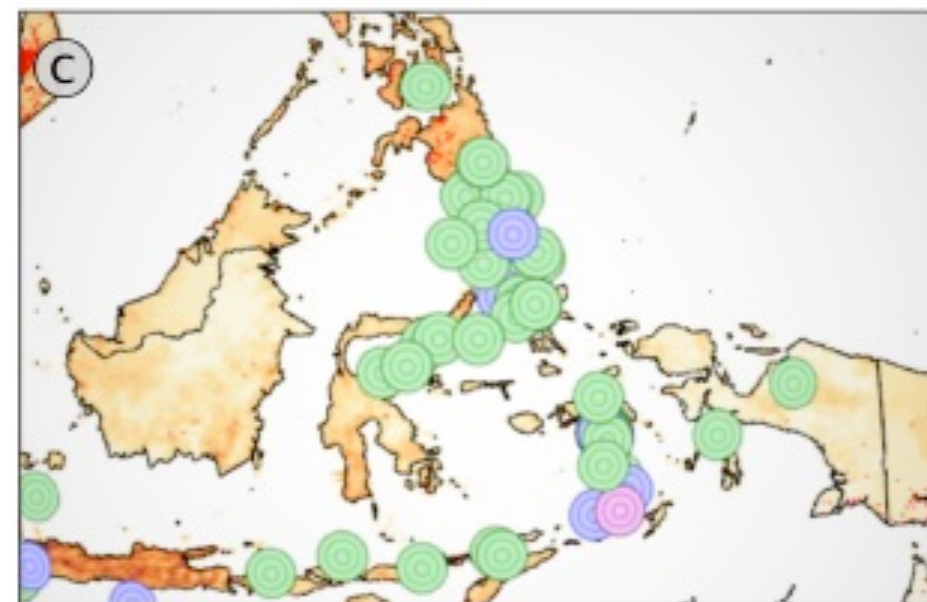

Results – Layering on Surfaces

Multivariate Geographic Visualization

- Visualization design
